A world of science relies on trustworthy evidence\textsuperscript{1,2}

Collecting and analysing real-world data can unlock valuable scientific discoveries for the benefit of your patients and the whole healthcare ecosystem.

So far, collecting such data has been complex, time-consuming, and often discouraging.

Discover Evidens™ solutions: fully customisable, secure, and user-friendly digital platforms available to healthcare organisations for the collection of real-world data.

Evidens™ has been developed by Roche. Your electronic health data will remain your property.
A world of evidence

The Evidens™ solutions comprise three digital platforms. Our team will partner with you to select the one that best fits your needs.

Clarum helps you to harness the power of real-world evidence through the rapid and secure creation of disease registries. Various pre-configured disease templates are available, including multiple sclerosis, oncology, breast cancer, COVID-19, spinal muscular atrophy and haemophilia.

Evidens™ allows you to fully configure and customise a disease registry for any disease not yet covered in our pre-configured Clarum templates, or to collect any patient data to support the healthcare ecosystem.

Revela helps you to supplement your patient’s medical records with intuitive and ready-to-use software. It enables you to connect with your patients and to follow their journeys.
